

You are now in a unique position to give your pets the leading edge over their health.

Let me explain . . .

Annual Health Checks combine all the benefits of a comprehensive examination and vaccination that will be invaluable to the health of your pet if we discover any problems.

A Wealth Of Information From One Visit

The comprehensive physical examination will screen your pet's various organ for any potential problems that may be detectable on the physical examination.

Here's what your pet will receive during the visit:

- A comprehensive physical examination that covers all the major systems including temperature, weight, heart and lungs, abdomen, heart, eyes, ears, musculoskeletal, lymph nodes, ears and skin.
- A booster vaccination - giving protection against a number of very serious diseases.

An Ounce of Prevention. . .

A comprehensive physical examination and appropriate vaccination is recommended for your pet.

Since pets age **approximately** 7 years to our 1 year, an annual examination is extremely important to the health of your pet. Here's why:

- It allows us to detect your pet's health problems in a very early state, which gives you a better opportunity to make decisions on treatment. And as you know, early treatment typically leads to better patient outcomes – and for a lesser price.

We'll check your pet's records prior to your appointment. If there are on-going health problems, we may recommend some blood or urine tests.

Early Detection = Better Management of Disease = Longer Life

Decide on a date and time that suits you best and then please us a call on **4872 1144** and our reception team will be able to book a time that suits you.

Alternatively, you can make an appointment on-line via the booking link on the practice website or from the practice Facebook page.

If you have the practice App, then you can also make a booking through the app.

Best of all, both you and your pet get the peace of mind that comes from knowing that staying healthy is just a veterinary visit away.

Warmly

The Team at HIGHlands Veterinary Hospital
